

# Master of Professional Studies Information Science

The Master of Professional Studies in the Information Science program is intended for students who wish to study one or more facets of information science at an advanced level. Studying information and its technical, social, cultural, economic, historical, legal, and political contexts prepares students for careers in:

- management and design of information systems
- the design and application of information oriented applications
- dissemination of innovative information media
- definition and implementation of information policy

Prospective students should have an undergraduate degree that include coursework combining quantitative, technical, and human-centered systems components. Examples of undergraduate majors that may provide such background include computer science, communication, information science, operations research, statistics, economics, psychology, sociology, and science and technology studies. Minorng in Information Science is also a good way to prepare for the MPS program.
